

ABSTRACT

1 The present invention is directed to an electrical equipment enclosure assembly.
2 particularly those used to house power distribution equipment. The enclosure uses the
3 internal structural members and panel components to form the enclosure frame. The
4 present invention is also designed to be mounted in the 2 ft. x 2 ft. (600mm x 600mm) tile
5 space provided in raised flooring. The enclosure is also provided with a junction box that
6 is mounted beneath the raised flooring to allow users to terminate wiring.
